

Brand specification

Every size the Interchange ecosystem needs, measured from the artwork and the code that uses it · 2026-09-18

Only three files were supplied, and only three are needed. Everything in this document is derived from them by scripts/build-brand-assets.ts — no size here was cut by hand, and none should be. If a size is wrong, the fix goes in that script and this document is re-generated.

Screen

Sizes are CSS pixels at 1×. Every raster is served at 2× or better and scaled down, because a mark that is served at its display size is a mark that looks soft on every phone sold since 2015.

WHERE	ELEMENT	SIZE	ASSET
Public site header	Mark	32 × 32 px (render), 8mm equivalent	mark-192.png
	Served at 192px and scaled down, so it stays crisp on a 2× display. The wordmark beside it is LIVE TEXT, not artwork.		
Public site header	Wordmark	13px, letter-spacing 0.3em, uppercase	type, not artwork
	The supplied lockup sets “Inter” in navy #003868, which measures 1.6:1 on the dark header and cannot be read. Type can be.		
Console header	Mark	28 × 28 px	mark-192.png
	Slightly smaller than the site: the console is an instrument and the chrome should recede.		
Site footer	Mark	28 × 28 px	mark-192.png
Sign-in gate	Mark	64 × 64 px	mark-192.png
	The one screen where the mark is the only thing on the page, so it earns the size.		
Browser tab	Favicon	512 × 512 px source	app/icon.png
	Next.js serves every size the browser asks for from this one file. Must read at 16px — the mark does; the full lockup would not.		
iOS home screen	Apple touch icon	180 × 180 px, opaque	app/apple-icon.png
	The ONLY asset with deliberate padding and a solid white ground. iOS masks edge to edge and renders a transparent icon black.		
Android / PWA	Home screen icon	192 × 192 px	mark-192.png
WhatsApp, LinkedIn, X	Share card	1200 × 630 px	og-1200x630.png
	On PAPER, not on the console ground. Every one of these platforms crops from 1200×630 and overlays chrome on the right third, so the lockup sits left.		

Print and documents

Sizes are millimetres on A4. The PDF renderer inlines every image as a data URI — a relative URL resolves to nothing from the temporary directory a document is printed in, and the failure is silent.

WHERE	ELEMENT	SIZE	ASSET
Report letterhead	Horizontal lockup	11mm tall, width follows (≈55mm)	lockup-800.png
	Inlined as a data URI. A relative URL resolves to nothing in the PDF renderer and the letterhead prints empty, with no error anywhere.		
Report letterhead	Address block	6.6pt, right aligned, 4–5 lines	text
	Registration numbers share one line so the block never grows past five lines and push the first heading below the fold.		
Cashflow report cover	Mark + wordmark	10mm mark, 11pt wordmark	mark-192.png
	The dark cover uses the mark and live type for the same contrast reason as the site header.		
Every report page	Brand edge	3.2mm wide, full height	gradient, no file
	Navy at the top to green at the bottom. The cheapest way to make loose pages read as one document.		
Report page	Page size and margin	A4 portrait, 210 × 297mm, 14–15mm margin	–
	Wide enough for a hole punch and a filing stamp.		
Invoice / letter	Lockup	11mm tall	lockup-800.png
	Same as the report letterhead, so the two are recognisably one house.		
Slide master	Lockup	Up to 1600px wide	lockup-1600.png
Email signature	Lockup	400 × 80 px, or 200px CSS width	lockup-400.png
	Some clients drop the alpha channel — use lockup-800-white.png there.		

Clear space and minimum sizes

Measured from the artwork's own content box. The supplied PNGs carry roughly 20% whitespace inside their canvas; that is packaging, not clear space.

WHERE	ELEMENT	SIZE	ASSET
All surfaces	Clear space	Half the mark's height on every side	—
	Measured from the artwork's own content box, not from the delivered PNG's canvas — the supplied files carry ~20% whitespace of their own, and treating that as the clear space makes the logo read timid.		
All surfaces	Minimum mark size	16px screen / 5mm print	—
	Below this the hub and the four nodes merge into a blob.		
All surfaces	Minimum lockup width	120px screen / 32mm print	—
	Below this the strapline is unreadable and the lockup should be replaced by the mark.		
Dark surfaces	Lockup	Do not use	—
	The wordmark is navy #003868. On the console ground #040605 that measures 1.6:1. Use the mark plus live white type.		

The files

What exists today, and what each one is for.

FILE	PIXELS	SIZE	USED FOR
public/brand/mark-512.png	512 × 512	193 KB	Source for anything larger; press and print
public/brand/mark-192.png	192 × 192	42 KB	PWA and Android home screen; every in-app mark
public/brand/mark-64.png	64 × 64	7 KB	Console sidebar, sign-in card
public/brand/mark-32.png	32 × 32	3 KB	Site header, table rows
public/brand/lockup-1600.png	1600 × 320	340 KB	Press kit, slide masters, large print
public/brand/lockup-800.png	800 × 160	108 KB	Letterhead at 2× — what the PDF renderer inlines
public/brand/lockup-400.png	400 × 80	37 KB	Web header on light ground, email signature
public/brand/lockup-800-white.png	800 × 160	93 KB	Email clients and Office templates that drop alpha
public/brand/og-1200x630.png	1200 × 630	123 KB	WhatsApp, LinkedIn and X link previews
public/brand/logo.png	1983 × 793	919 KB	As supplied — flat white ground
public/brand/logo-transparent.png	1983 × 793	427 KB	As supplied — transparent
public/brand/logo-favicon.png	440 × 440	100 KB	As supplied — the mark alone

Colour

Sampled from the supplied artwork, not chosen. Navy carries structure and type; green carries movement and success. Neither is ever used for a warning — those stay amber and red, which is why the arrears ramp in the report kit is a separate single-hue scale.

 Navy #003868 Structure, wordmark, letterhead rules, the top of the page edge	 Navy mid #185098 The lighter blue nodes in the mark; secondary rules	 Green #409828 Movement and success; the bottom of the page edge
 Green light #40A030 The lighter green nodes in the mark	 Console ground #040605 The console and the dark report surface	 Paper #FCFCFB Every printed report except Cashflow & Affordability

The mark at every size it is used

				
64px	48px	32px	24px	16px
16px is the floor. Below it the hub and the four nodes merge and the glyph stops being a glyph.				

What is still missing

The three supplied files cover everything built so far. These are the gaps that will be felt later, in the order they will be felt.

MISSING	WHERE IT WILL BE NEEDED	WHY IT CANNOT BE DERIVED
SVG master of the mark	Any size above 512px; embroidery; signage; email	The supplied PNG has gradients and soft joins. Tracing it would be a redrawing, not a conversion, and the result would not be the same mark.
White / knockout lockup	Dark decks, the dark report cover, merchandise	The wordmark is navy. Recolouring a raster leaves haloes on the anti-aliased edges. Until it exists, dark surfaces use the mark plus live type, which is what they do today.
Single-colour black lockup	Fax, stamps, one-colour print, legal filings	Flattening two hues to one needs a designer's judgement about which shapes survive.
ODPC registration number	Every report footer and the privacy notice	Not supplied, so it does not print. A plausible-looking number on a regulated document would be a fabrication.
