CONNECTEDSUITE

PRE-SEED · TECHCRAST CONNECTEDSUITE

Investor Memorandum: the operating system for licensed lenders

Kenya's licensed lenders run their books on disconnected tools: a loan system here, a call-centre there, spreadsheets for the board and a bureau they can only afford to call sparingly. ConnectedSuite replaces the patchwork with one estate, and connects the lenders on it into an exchange that learns what the whole market knows.

For	Company	Stage	Date
Prospective investors	**Techcrast ConnectedSuite**	**Pre-seed · revenue-generating**	**20 October 2026**

Confidential. Not an offer of securities; any investment is made only on signed definitive documents. Figures about partner lenders are aggregated, and are not to be disclosed further without the partners' consent.

01 The opportunity in one page

SYSTEMS LIVE

7

One sign-in across lending, collections, customer app, analytics, accounting, HR and the exchange.

PAYING LENDERS

2

Founding partners at KES 30,000 a month each. A collections call-centre runs on CallBox as well.

POSITIONS ON THE EXCHANGE

75,025

From four member books, September 2026. 2,252 borrowers are held by two or more lenders.

LENDERS RECOGNISED

358

CBK-listed institutions the statement engine identifies in an M-PESA statement.

The problem. A licensed lender in Kenya typically runs a loan management system, a separate collections floor with its own dialler and database, an accountant's ledger kept apart from the book, a CRB contract it rations because every pull costs money, and no view at all of what a borrower owes to other lenders until the borrower defaults. Each tool is bought, integrated and reconciled separately, and none of them speaks to the others.

What we built. ConnectedSuite is one estate for a lender: seven systems on one identity, one organisation structure and one record of each borrower. The lending console, the call floor, the customer app and the management reports all read the same live book. It works over a lender's existing ServiceSuite database ("bridged") or on its own ("native"), so a lender joins without migrating its history.

The moat: the Interchange. Every lender on the estate can join the Interchange, an exchange where members contribute tokenised positions and query a borrower's exposure across all members, without any member seeing another's book. Ecosystem reports are free to contributors, so the network grows by reciprocity. Bureau reports are fulfilled under a licensed bureau contract at cost plus a stated margin. Each new lender makes the exchange more valuable to every existing one, and a lender that leaves the estate loses that view.

02 Product

SYSTEM	FOR	STATUS
Lending Console	Origination, KYC, scoring, approvals, disbursement, repayments, collections, dashboards (CPR, PAR, PQS, collection rate) and a closed machine-learning loop that labels every loan at maturity.	Live
CallBox Call-Center	The collections floor: PBX-integrated dialler (Yeastar S-series and P-series), queues, promises to pay, call records and recoveries; works on a lender's existing CallBox or ConnectBox data.	Live
Customer Portal	The borrower's app in the lender's own brand: apply, track, repay by M-PESA STK, statements.	Live
Analytics & Reporting	The whole book for managers and boards, with scheduled reports and a report builder.	Live
Ledgerly Accounting	Reads the lender's existing double-entry journal and reports movement and cash flows.	Live

PeopleHub HR	One record per staff member, joined from the book, the branch tree and the call floor.	Live
The Interchange	Member exchange: exposure checks, consent register, signed node-to-node protocol, bureau orchestration, cash-flow reports from M-PESA statements.	Live
Riri	The AI across the estate: answers staff questions about the book in English and Swahili, guides customers, and supports the call floor.	Live

Hosting moved to a Nairobi data centre in October 2026, so that the application, its database and the lenders' own databases are a few milliseconds apart instead of 200 ms away in Europe.

03 Market

The Central Bank of Kenya licenses digital credit providers under the 2022 regulations; well over a hundred are licensed. Alongside them sit microfinance banks, credit-only lenders and several hundred SACCOs. Every one needs a loan book, collections, reporting and credit information, and most of the smaller ones still assemble these from separate vendors. The same model travels across East Africa, wherever mobile money and licensed non-bank lending have grown together.

We sell to the lender, not the borrower, and our price does not depend on loan volume. That keeps us aligned with the regulator's push for responsible, well-documented lending rather than volume.

04 Business model

REVENUE LINE	HOW IT IS CHARGED	TODAY
Subscriptions	Per system per month: Lending Console 30,000 (Startup edition 20,000), CallBox 15,000, Customer Portal 10,000, Analytics 7,500, Ledgerly 7,500, PeopleHub 5,000, Interchange 10,000. Discounts of 10–20% for multiple systems.	KES 60,000 MRR from two founding partners
Usage	Scores, statements, documents, Riri and identity checks beyond monthly allowances; SMS as prepaid bundles.	Metered from day one
Interchange bureau reports	Bureau net cost plus a stated margin, per report.	Live through one contract holder
Onboarding	One-time set-up and migration: KES 50,000 standard, 25,000 for startups.	Waived for founding partners

Unit economics. A lender on the console and call-centre pays KES 40,500 a month; the whole estate is KES 68,000. Infrastructure is shared, so the marginal cost of a lender is mainly onboarding and support. Because a lender's day-to-day operations run on the estate, switching costs are high once it is live.

Targets (management estimates)

BY	LENDERS	AVERAGE MONTHLY SUBSCRIPTION, KES	MONTHLY RECURRING REVENUE, KES	ANNUALISED, KES
Dec 2026	3	30,000	90,000	1.1M
Dec 2027	15	40,000	600,000	7.2M

Dec 2028	50	45,000	2,250,000	27.0M

Subscriptions only. Usage and Interchange revenue are upside and are excluded. These targets assume the raise below; they are not forecasts and are not guaranteed.

05 Traction and proof

- **Two founding partners**, both established Kenyan lenders, run their books and collections on the estate. Both have agreed to contribute to the Interchange.
- **A collections call-centre business** runs its floor on CallBox alone, serving lenders of its own. That shows each system sells on its own.
- **The Interchange went live on real books** in September 2026: 75,025 positions from four member books, with 2,252 borrowers (3.0%) found at more than one lender, computed from tokens alone.
- **Bureau orchestration proven end to end**, from a lender's console through the exchange to the bureau, with 13 of 14 report types entitled on the contract.
- **Machine learning on real outcomes:** every pilot loan is frozen as a training row at payout and labelled at maturity, so the scoring model learns from what actually happened.

06 The raise

RAISING

KES 25M

About USD 190,000, for 18 months of runway.

INSTRUMENT

Convertible

A convertible note or SAFE that converts into preference shares at the next priced round.

INDICATIVE CAP

KES 260M

Post-money valuation cap, with a 20% discount to the next round. To be agreed.

USE OF FUNDS	SHARE	WHAT IT BUYS
Engineering	40%	Two engineers: the remaining front doors, native-mode lending, the eTIMS invoice link, and Interchange scale.
Sales and lender success	25%	Two lender-success managers for onboarding, training and renewals; partner referral programme.
Compliance and legal	15%	Data-protection registrations and audits, the regulatory opinion on the Interchange, bureau agreements, trademarks.
Infrastructure and security	12%	Redundant Nairobi hosting, backups, penetration testing.
Working capital	8%	Contingency.

Investor rights. Investors receive information rights (quarterly management accounts and an annual budget), pro-rata rights in the next round, and the protections usual for preference shares at conversion. The founder retains control of the board and of day-to-day decisions.

07 Risks, stated plainly

RISK	HOW IT IS HANDLED
Regulation of credit-information sharing	The Interchange shares only tokenised aggregates under borrower consent, and bureau data only under a licensed bureau's contract. A formal regulatory opinion is funded in this raise.
Concentration in two lenders	Both are founding partners on 24-month agreements. The startup edition and the referral programme are designed to widen the base quickly.
Key-person dependence	Engineering hires and documentation (user guides, runbooks, architecture records) are a funded priority.
Data protection	Lenders are controllers and Techcrast their processor; data is separated per lender; access is audited; hosting is in Kenya.

08 Next step

A demonstration on a live book (with the partner's consent), a data-room walk-through, and a term-sheet conversation. Contact Emmanuel Birgen, founder: birgen@techcrast.co.ke.
