

Seven plates between here and gorgeous

Two products, two visual registers, one specification. The apex needs **four new photographs of Kenyan working life**; the staff suite needs **three of its six plates regenerated** to remove a watermark that will otherwise be projected in front of Micromart's management. Every prompt below is paste-ready.

26 August 2026	4 new · 3 regenerate	WebP, q80	Before the demo
Issued	Scope	Delivery format	Deadline

The apex 4 NEW · microeazy.servicesuitecloud.com

The right half of the customer sign-in screen. Warm, human, documentary — the opposite register to the suite, deliberately. These are the people who actually borrow here, and the panel is currently a flat gradient waiting for them.

THE COMPOSITION RULE, AND WHY IT DIFFERS FROM THE SUITE'S

On the staff doors the sign-in card sits *on* the artwork, so those plates keep their left third empty. Here the card has its own column and the photograph owns a full half — but the slider's headline is centred over it.

So: keep the centre calm. Subject to one side, or far enough back that a two-line heading can cross the middle without landing on a face. Every prompt below already says this; do not drop it.

One more, and it is the one that matters most: **dark skin must be rendered with real warmth and detail in the shadows.** Image models routinely grey it out or crush it. Reject any frame where it reads ashy.

● Mama mboga NEW

/images/login/ke-mama-mboga.webp

Slide 1 — “**Your business does not wait. Neither should your loan.**”

PROMPT

Editorial photograph, early morning golden light. A confident Kenyan woman in her forties – a mama mboga – arranging tomatoes and sukuma wiki at her roadside vegetable stall in Nairobi. Deep, rich dark skin rendered with true warmth and detail, never washed out or greyed. She is mid-task and unposed, glancing off-camera, quietly capable. Subject sits in the RIGHT third of the frame; the LEFT and CENTRE fall away into softly blurred market depth so a heading can sit across the middle without touching her face. Natural documentary colour, shallow depth of field, 35mm. No text, no logos, no watermark, no badge of any kind.

FundiNEW

/images/login/ke-fundi.webp

Slide 2 — “Tools, stock, rent — funded the same day.”

PROMPT

Editorial photograph, warm workshop light through a doorway. A Kenyan fundi — a skilled carpenter in his thirties — measuring a length of timber in his open-air workshop, sawdust suspended in a shaft of light. Deep dark skin lit with warmth and clear detail in the shadows. Focused on the work, not the camera. Subject occupies the RIGHT of the frame; the LEFT and CENTRE recede into soft workshop depth. Honest documentary colour, no orange grade, shallow depth of field, 50mm. No text, no logos, no watermark, no badge of any kind.

Duka ownerNEW

/images/login/ke-duka.webp

Slide 3 — “Every decision explained. Never a silent no.”

PROMPT

Editorial photograph, soft interior daylight. A Kenyan woman in her thirties behind the counter of her duka — a small neighbourhood shop — checking something on her phone, shelves of stock softly out of focus behind her. Deep dark skin rendered warmly with genuine detail and catchlight in the eyes. Calm, self-possessed, mid-thought. She sits to the RIGHT; the CENTRE of the frame is quiet shop interior. Natural colour, shallow depth of field, 35mm. No text, no logos, no watermark, no badge of any kind.

Boda riderNEW

/images/login/ke-boda.webp

Slide 4 — “Repay from your phone, wherever the day takes you.”

PROMPT

Editorial photograph, late afternoon light. A young Kenyan boda boda rider standing beside his motorcycle at the edge of a busy Nairobi street, helmet under one arm, taking a moment. Deep dark skin with warm, true-to-life rendering and detail retained in the shadows. Dignified and unhurried, not a stock smile. Subject to the RIGHT of frame; the LEFT and CENTRE are softly blurred street depth and warm bokeh. Documentary colour, shallow depth of field, 50mm. No text, no logos, no watermark, no badge of any kind.

The suite3 REGENERATE · six staff doors

All six plates exist and are compositionally right. Three of them came back from the tool with a “Made with AI” badge burned into the top-right corner — which is exactly where the eye lands after the sign-in card, on a projector, in front of senior management. Three came back clean from the same tool, so regenerating is a two-minute job, not a redesign.

PLATE	SYSTEM	STATUS
login-lending	Lending Console	Clean — leave it
login-analytics	Analytics Studio	Clean — leave it

PLATE	SYSTEM	STATUS
login-people	PeopleHub	Clean — leave it
login-portal	Customer Portal	Badge — regenerate
login-desk	ConnectDesk	Badge — regenerate
login-books	Ledgerly	Badge + wrong hue — regenerate

HOUSE STYLE — PREPEND THIS TO ALL THREE

Abstract architectural photography, shot on a full-frame camera with a 35mm lens at f/8. Deep near-black background (#0b0a10) occupying at least 60% of the frame. A single soft directional light source from the upper left. Fine film grain. No text, no letters, no numbers, no logos, no watermarks, no people, no faces, no hands. No UI, no screens, no charts, no dashboards. Composition weighted to the RIGHT THIRD so the left third stays near-empty and dark for a sign-in card to sit on. Muted, desaturated, cinematic. Photorealistic, not illustrative. 2560x1600, landscape.

● Customer Portal

REGENERATE

#0e7490

login-portal.webp

Open, welcoming, human-scale. The front door a customer sees. **Current file carries the badge.**

PROMPT — AFTER THE HOUSE STYLE

Subject: a single doorway standing open in a dark wall, teal-cyan daylight (#0e7490) spilling through it across a polished floor, the reflection stretching toward the viewer. Everything outside the doorway is unresolved and dark. The feeling is invitation and arrival — one way in, and it is open. Teal as the only chroma. Nobody in the frame.

● ConnectDesk

REGENERATE

#be123c

login-desk.webp

Warm, alive, connected. Voices moving through the dark. **Current file carries the badge — and this is the system being sold hardest.**

PROMPT — AFTER THE HOUSE STYLE

Subject: dense bundles of fibre-optic cable curving through darkness, each strand ending in a pinpoint of crimson-rose light (#be123c), the bundles braiding together toward the right of the frame. Shallow depth of field so the near strands are sharp and the far ones dissolve. The feeling is many separate conversations travelling the same path. Crimson as the only chroma.

Exact, balanced, quiet. The truth about the money. **Badge, plus the only plate that misses its hue** — the delivered image reads brass and gold at roughly 35°, against Ledgerly's green-teal at 175°. The accent is a colour code shared with the sidebar and the tiles, so this one is worth getting right rather than accepting.

PROMPT — AFTER THE HOUSE STYLE

Subject: a balance scale of dark blackened steel standing in near-darkness, both pans empty and perfectly level. Deep green-teal light (#0f766e) rims the beam, the chains and the upper edge of both pans, and a soft teal pool of the same colour spreads on the surface beneath it. The metal is MATTE DARK GREY-BLACK, not brass, not gold, not bronze, not copper — there must be no warm yellow or amber anywhere in the frame. Background falls away entirely to black. Macro-sharp on the pivot, soft everywhere else. The feeling is exactness and equilibrium — two sides that agree. Green-teal as the only chroma in the image. The scale sits in the right third.

Delivery

Specs & pipeline

	APEX — LOGIN PANEL	SUITE — STAFF DOORS
Dimensions	1600 × 1800 (portrait-ish crop)	2560 × 1600 (landscape)
Format	WebP, quality 80	WebP, quality 80
Weight budget	120–180 kB each	~40 kB each
Destination	pwa/public/images/login/	connected-suite/public/images/suite/
Register	Warm documentary, people	Cold abstract, no people
Empty state	Tenant gradient — already correct	Accent gradient — already correct

WHY THE ENCODE STEP IS NOT OPTIONAL

The suite plates arrived as ~1.5 MB PNGs and the set totalled **8.02 MB**. PNG is the wrong container for a photograph, and these load before anything else on a sign-in page. Re-encoded to WebP the same set is **230 kB — 97% smaller**, with nothing visible lost through the scrim the card sits on. Keep the PNGs on disk as masters; the code reads the .webp.

```
npm run art:prompts           # print the suite prompts,
paste-ready
npm run art:optimize          # dry run — report what the
encode would do
npm run art:optimize -- --write # encode
```

ONE THING TO FIX ON MICROMART'S SIDE, NOT OURS

Entity **3005 (MICROMART FINTECH)** — the entity both the app and the staff suite now read — has an empty branding row: `primaryColor` and `secondaryColor` both return `#000000`, and `ggDriveFolder` returns the string "Failed". Those are values rather than absences, so a naive fallback paints a black-on-black interface.

The app guards against it and falls back to Micro Eazy navy, which is why the sign-in screen looks right today. But it is *not* Micromart's brand. Ask them to fill that row in and the real colours apply everywhere with no code change — the guard stops matching on its own.
