Were the Fintech customers given to the right agents?

On 6 October Geoffrey reported that Fintech customers on CallBox had gone to agents of the wrong bands: Prepayment agents such as Japheth Okwara and Mary Bosibori were holding Due and Watch 1 cases. **He was right about 6 October.** The cause was ConnectDesk's own bridge pull of 4 October, not Micromart's system. Micromart's 01:30 run corrected every case overnight. This morning every Fintech case is with an agent on its band's team, and the code that caused it has been fixed.

1 The answer in three numbers

6 OCT, IN GEOFFREY'S EXPORT

5 of 9

cases with an agent outside their band's team: three of Japheth's, both of Mary's.

THIS MORNING

0 of 159

Fintech cases CallBox lists sit outside their band's team. The SME book reads the same: 0 of 47,948.

THE CAUSE, 4 OCT

139 of 188

cases ConnectDesk's pull wrote went to an agent outside their band's team.

"Band's team" is Micromart's own list, `CollectBox.dbo.LoanCategories.Agents`. For example, Prepayment is agents 260, 256, 237 and 233 (Japheth Okwara, Shadrack Ipili, Erick Nyamwega, Mary Bosibori), and Due is 262, 255 and 235 (Sheila Asiko, Ian Kimutai, Susan Kwamboka).

2 The nine cases in the export

LOAN	CONNECTDESK PULL, 4 OCT	GEOFFREY'S EXPORT, 6 OCT 16:00	TODAY, 7 OCT	TEAM CHECK TODAY
446509	PRE → Sheryl Bala	PRE Japheth Okwara ✓	DUE Ian Kimutai	✓ Due team
448229	PRE → Rosemary Aoko	PRE Japheth Okwara ✓	DUE Ian Kimutai	✓ Due team
450361	PRE → Susan Kwamboka	W1 Japheth Okwara ✗	W1 Rosemary Aoko	✓ Watch 1 team
452170	PRE → Anne Mukonyi	PRE Japheth Okwara ✓	PRE Japheth Okwara	✓ Prepayment team
453257	PRE → Lilian Muia	DUE Japheth Okwara ✗	W1 Sheryl Bala	✓ Watch 1 team
453649	PRE → Japheth Okwara	W1 Japheth Okwara ✗	W1 Moses Mukanzi	✓ Watch 1 team
453676	PRE → Maureen Oguda	PRE Japheth Okwara ✓	DUE Ian Kimutai	✓ Due team
449526	PRE → Metrine Mutoro	DUE Mary Bosibori ✗	W1M Rosemary Aoko	✓ Watch 1 (Matured) team
451384	PRE → Metrine Mutoro	DUE Mary Bosibori ✗	W1 Oscar Walubiri	✓ Watch 1 team

Every one of the nine was written as Prepayment by the pull. The agents changed twice: the pull's choice, then a Prepayment agent, then (overnight to 7 Oct) an agent from the right team. The bands also moved for ordinary reasons, as instalments fell due and went unpaid.

3 How it happened

4 Oct 16:40	**ConnectDesk's bridge pulled 188 Fintech cases onto the tracker, with two faults.** It labelled every loan whose next instalment lay in the future "Prepayment", but Micromart's Prepayment means the one or two days before a due date. It also handed each case to whichever of 25 floor agents carried the least balance, ignoring the band's team. 139 of the 188 went outside their band's team. (The 18 Due cases failed outright with SQL error 264 and were never written.)
5 and 6 Oct 01:30	**Micromart's nightly run kept ConnectDesk's Prepayment label** because the rows carried no amount: their five-minute run zeroes amounts it did not write itself, and the Fintech hook was not in yet. Its assigner then moved the cases to the Prepayment team (Japheth Okwara, Mary Bosibori, Shadrack Ipili, Erick Nyamwega). That was right for the label but wrong for the loan.
6 Oct 11:01	**The hand-run feed (fintech-migration 16.5) re-banded the rows from their real amounts** (Due, Watch 1 and so on) but did not move agents, because by design that is Micromart's 01:30 decision. From then until 01:30, Prepayment agents held Due and Watch 1 cases. Geoffrey's export at 16:00 captured exactly this.
6 Oct 12:43	The hook (16.4) went in. Micromart's own run now feeds Fintech every five minutes; its log shows a clean pass at 09:03 this morning.
7 Oct 01:30	**Micromart's run re-sorted every Fintech row** from its real amounts and moved every case whose agent was not on its band's team. Since then: 0 outside, on either book.

4 What is fixed, and what is normal

Fixed in ConnectDesk

- **The bridge allocates only inside each band's team**, spread evenly by count as Micromart's assigner does. A band with no team leaves its cases for Micromart's assigner. The old fallback to "the first agent in the list" is gone.
- **The pull no longer writes a loan that is in no window** (next instalment more than two days away). It stays refused while Micromart's run feeds Fintech, which it does now.
- **The Fintech bridge's customer table has an Agent column.** Each case shows its agent, the band CollectBox holds it in, and a ✓ or ✗ against that band's team, so a repeat of 6 October is visible without opening CallBox. The "Who carries it now" panel lists each agent with the bands they hold.
- **The work queue has SME and Fintech chips and an Entity column**, so an agent can work Fintech customers only and always sees a record's book before calling.

Normal, on both books

During the day, a case that changes band (it falls due, or is paid) keeps its agent until Micromart's 01:30 run re-sorts it. That is how CollectBox works for the SME book too; it is not a fault. Nothing needs changing in CallBox itself.

Method: read-only queries against CollectBox and Serviceconnect on Micromart's server, and ConnectDesk's own record of the 4 Oct pull (DeskInteraction, kind PIPELINE). Team membership is LoanCategories.Agents as read on 7 Oct 2026. Loan ids only; no customer names. Prepared by ConnectDesk engineering.
