ConnectedSuite

PRE-SEED · CONNECTEDSUITE, BY BIRGENAI HUB

Investor Memorandum: the operating system for licensed lenders

Kenya's licensed lenders run their books on disconnected tools: a loan system here, a call-centre there, spreadsheets for the board and a bureau they can only afford to call sparingly. ConnectedSuite replaces the patchwork with one estate, and connects the lenders on it into an exchange that learns what the whole market knows.

For	Company	Stage	Date
Prospective investors	**BirgenAI Hub Limited**	**Pre-seed · revenue-generating**	**27 October 2026**

Confidential. Not an offer of securities; any investment is made only on signed definitive documents. Figures about partner lenders are aggregated, and are not to be disclosed further without the partners' consent.

ConnectedSuite is developed and owned by BirgenAI Hub Limited, founded by Emmanuel Birgen, and distributed by Techcrast Software Solutions Limited.

01 The opportunity in one page

SYSTEMS IN THE ESTATE

7

One sign-in across lending, collections, HR, customer app, analytics, accounting and the exchange.

PAYING CLIENTS

3

Two founding lenders at KES 30,000 a month each, and a call-centre on CallBox at 15,000.

POSITIONS ON THE EXCHANGE

77,158

From four member books, 24 October 2026. 2,428 borrowers are held by two lenders.

LENDERS RECOGNISED

358

CBK-listed institutions the statement engine identifies in an M-PESA statement.

The problem. A licensed lender in Kenya typically runs a loan management system, a separate collections floor with its own dialler and database, an HR and payroll tool, an accountant's ledger kept apart from the book, and a CRB contract it rations because every pull costs money. It has no view of what a borrower owes other lenders until the borrower defaults. Each tool is bought, integrated and reconciled separately, and none of them speaks to the others.

What we built. ConnectedSuite is one estate for a lender: seven systems on one identity, one organisation structure and one record of each borrower. The lending console, the call floor, the HR system, the customer app and the management reports all read the same live book. It works over a lender's existing ServiceSuite database ("bridged") or on its own ("native"), so a lender joins without migrating its history.

The moat: the Interchange. Every lender on the estate can join the Interchange. Members contribute tokenised positions and check, live, whether an applicant is servicing loans at other members, without any member seeing another's book. Ecosystem reports are free to contributors, so the network grows by reciprocity. Bureau reports are sold on a published rate card. Each new lender makes the exchange more valuable to every existing one, and a lender that leaves the estate loses that view.

02 Who owns and sells it

OWNER AND DEVELOPER

BirgenAI Hub Limited

A private company under the Companies Act, 2015, founded by Emmanuel Birgen, who conceived ConnectedSuite and is its lead engineer. It owns the code, the models, the Interchange protocol and the marks. It invoices every ConnectedSuite subscription and is paid it, into its own till.

DISTRIBUTOR

Techcrast Software Solutions

Packages and sells ConnectedSuite under its umbrella and mark, and licenses ServiceSuite, on which many Kenyan lenders hold their books. It is paid for its own services directly, and for distribution under a separate agreement.

FOUNDING LENDING PARTNERS

Axe and Micromart

Bound by a four-party Founding Partnership Agreement (TC-FPA-2026-02) that fixes roles, ownership, pricing by accepted system, and how the Interchange and its bureau resources are shared.

03 Product

SYSTEM	FOR	STATUS

Lending Console	Origination, KYC, scoring, approvals, disbursement, repayments and collections. Dashboards for CPR, PAR, PQS and collection rate, and a closed machine-learning loop that labels every loan at maturity.	Live
CallBox Call-Center	The collections floor: PBX-integrated dialler (Yeastar S-series and P-series), queues, promises to pay, call records and recoveries.	Live
PeopleHub HR	The whole HR estate: records, geofenced attendance from a staff app, leave, hiring, performance fed from the book, payroll preparation on Kenya's statutory rates, staff loans and privacy audit.	Pilot Nov 2026
Customer Portal	The borrower's app in the lender's own brand: apply, track, repay by M-PESA STK, statements.	Live
Analytics & Reporting	The whole book for managers and boards, with scheduled reports and a report builder.	Live
Ledgerly Accounting	Reads the lender's existing double-entry journal and reports movement and cash flows.	Live
The Interchange	Member exchange: live exposure checks, consent register, a signed node-to-node protocol, metered bureau orchestration, and cash-flow reports from M-PESA statements.	Live
Riri	The AI across the estate: answers staff questions about the book in English and Swahili, guides customers, and supports the call floor.	Live

Hosting moved to a Nairobi data centre in October 2026, so the application, its database and the lenders' own databases are a few milliseconds apart instead of 200 ms away in Europe.

04 Market

The Central Bank of Kenya licenses digital credit providers under the 2022 regulations, and well over a hundred are licensed. Alongside them sit microfinance banks, credit-only lenders and several hundred SACCOs. Every one needs a loan book, collections, HR, reporting and credit information, and most of the smaller ones still assemble these from separate vendors. The same model travels across East Africa, wherever mobile money and licensed non-bank lending have grown together.

We sell to the lender, not the borrower, and our subscription does not depend on loan volume. That keeps us aligned with the regulator's push for responsible, well-documented lending rather than volume.

05 Business model

REVENUE LINE	HOW IT IS CHARGED	TODAY
Subscriptions	Per system per month: Lending Console 30,000 (Startup edition 20,000), CallBox 15,000, PeopleHub HR 25,000, Customer Portal 10,000, Analytics 7,500, Ledgerly 7,500, Interchange 10,000. Discounts of 10–20% for multiple systems. A partner's subscription grows as it accepts new systems.	KES 75,000 MRR from November 2026; 95,000 once PeopleHub is accepted

Interchange bureau reports	A published rate card per report. The bureau's charge and taxes pass through to the contract holder, which earns 10% of the bureau's net price. The Interchange keeps the balance: about 17–24% of each report's price.	Metered from the first pull
Usage	Scores, statements, documents, Riri and identity checks beyond monthly allowances; SMS as prepaid bundles.	Metered from day one
Onboarding	One-time set-up and migration: KES 50,000 standard, 25,000 for startups.	Waived for founding partners

Unit economics. A lender on the console and call-centre pays KES 40,500 a month, and the whole estate is KES 84,000. Infrastructure is shared, so the marginal cost of a lender is mainly onboarding and support. Because a lender's day-to-day operations run on the estate, switching costs are high once it is live. Each Credit Info report sold on the exchange earns the Interchange KES 32.40 of its KES 170 price.

Targets (management estimates)

BY	LENDERS	AVERAGE MONTHLY SUBSCRIPTION, KES	MONTHLY RECURRING REVENUE, KES	ANNUALISED, KES
Dec 2026	3	31,700	95,000	1.1M
Dec 2027	15	45,000	675,000	8.1M
Dec 2028	50	50,000	2,500,000	30.0M

Subscriptions only. Usage and Interchange revenue are upside and are excluded. These targets assume the raise below; they are not forecasts and are not guaranteed.

06 Traction and proof

- **Two founding partners**, both established Kenyan lenders, run their books and collections on the estate and contribute their books to the Interchange.
- **A collections call-centre business** runs its floor on CallBox alone, which shows each system sells on its own.
- **The Interchange runs on real books:** 77,158 positions from four member books, with 2,428 borrowers found at two lenders, computed from tokens alone. Live exposure checks have run in production since 24 October 2026.
- **Bureau orchestration proven end to end**, from a lender's console through the exchange to the bureau, metered on every pull, with 13 of 14 report types entitled on the contract.
- **Machine learning on real outcomes:** every pilot loan is frozen as a training row at payout and labelled at maturity, so the scoring model learns from what actually happened.

07 The raise

RAISING

KES 25M

About USD 190,000, for 18 months of runway.

INSTRUMENT

Convertible

A convertible note or SAFE in BirgenAI Hub Limited, converting into preference shares at the next priced round.

INDICATIVE CAP

KES 260M

Post-money valuation cap, with a 20% discount to the next round. To be agreed.

USE OF FUNDS	SHARE	WHAT IT BUYS
Engineering	40%	Engineers employed by BirgenAI Hub under its lead engineer: PeopleHub's remaining modules, native-mode lending, the eTIMS invoice link, Interchange scale.
Sales and lender success	25%	Lender-success managers for onboarding, training and renewals, alongside Techcrast's distribution.
Compliance and legal	15%	Data-protection registrations and audits, the regulatory opinion on the Interchange, bureau agreements, trademarks.
Infrastructure and security	12%	Redundant Nairobi hosting, backups, penetration testing.
Working capital	8%	Contingency.

Investor rights. Investors receive information rights (quarterly management accounts and an annual budget), pro-rata rights in the next round, and the protections usual for preference shares at conversion. The founder keeps control of the board and of day-to-day decisions.

08 Risks, stated plainly

RISK	HOW IT IS HANDLED
Regulation of credit-information sharing	The Interchange shares only tokenised aggregates under borrower consent, and bureau data only under a licensed bureau's contract, with the contract holder's go-ahead. A formal regulatory opinion is funded in this raise.
Concentration in two lenders	Both are bound by the four-party Founding Partnership Agreement. The Startup Lender Programme, Techcrast's distribution and the referral credit are designed to widen the base quickly.
Key-person dependence	Engineering hires into BirgenAI Hub and documentation (user guides, runbooks, architecture records) are a funded priority.
Distribution dependence	The founding agreement lets BirgenAI Hub serve lenders directly if Techcrast's distribution role ends, and lenders' subscriptions continue unchanged.
Data protection	Lenders are controllers and BirgenAI Hub their processor. Data is separated per lender, access is audited, and hosting is in Kenya.

09 Next step

A demonstration on a live book (with the partner's consent), a data-room walk-through, and a term-sheet conversation. Contact Emmanuel Birgen, founder of BirgenAI Hub: birgenaihub@gmail.com.
