ConnectedSuite

FOR LENDER STAFF · LENDING CONSOLE, CALLBOX AND THE ESTATE

ConnectedSuite User Guide

Everything an administrator, loan officer, collections agent or manager needs to work the book in ConnectedSuite: signing in and installing your app, setting up the organisation, the borrower and loan lifecycle, payments, collections, dashboards, the Interchange and billing.

01 The estate at a glance

ConnectedSuite is a set of systems that share one sign-in (your **BirgenAI ID**), one organisation structure and one record of each borrower. Your organisation holds the systems it subscribes to, and each person sees the ones their role allows.

SYSTEM	WHAT YOU DO THERE	WHO USES IT
Lending Console	Borrowers, applications, approvals, disbursement, repayments, collections, dashboards	Officers, credit, finance, managers
CallBox Call-Center	The collections floor: dialler, queues, promises, call records, recoveries	Agents, supervisors
Customer Portal	What your borrowers see: apply, track, repay	Borrowers (staff can preview)
Analytics & Reporting	The whole book drawn: portfolio, branches, agents, collections, reports	Managers, board
Ledgerly Accounting	The journal, chart of accounts and cash movement	Finance
PeopleHub HR	The staff directory: officers, branches, the call floor	HR, managers
The Interchange	Exposure checks across lenders, consents, bureau reports	Credit, compliance

Bridged or native. If your organisation already keeps its book in ServiceSuite, the console works *on that book* ("bridged"): what you see is your ServiceSuite data, live. If you are new, your book lives in ConnectedSuite itself ("native"). The screens are the same either way.

02 Getting started

What you need

- A current Chrome, Edge, Safari or Firefox on Windows 10 or later, macOS, Android 8 or later, or iOS.
- Your work email, your password, and the phone number registered for your staff account (sign-in codes are sent by SMS).

- The address of your organisation's door, from your credential email, for example `lms.servicesuitecloud.com/axe`.

Signing in

1. Open your organisation's door. It carries your organisation's logo, colours and photograph, and the name of the system you are entering.
2. Enter your work email and password and press **Sign in**. Passwords are case-sensitive. After ten failed tries, sign-in pauses for 15 minutes.
3. Enter the 6-digit code sent to your phone by SMS. Today's code keeps working until midnight, so you will not need a new one each time you sign in that day.
4. You land in the system you came for. If your session ended mid-task, you are returned to the screen you were on.

Forgot your password? Press **Forgot password?** on the door. A reset code is sent to your registered phone; enter it and choose a new password.

Installing your organisation's app

Every organisation has its own installable app, in its own name and logo. Install it once and it opens like any desktop or phone app: its own window, its own taskbar icon, no browser bar.

Windows or Mac (Chrome, Edge)

On your organisation's door, press **Install <your organisation>** under the sign-in form, or use the install icon at the right of the address bar. The app appears on your desktop and in the Start menu.

Android

Press **Install** on the door, or open the browser menu and choose **Install app**. The icon appears on your home screen.

iPhone and iPad

In Safari, tap **Share**, then **Add to Home Screen**.

Right-click the taskbar icon (Windows) or long-press it (Android) for shortcuts straight to the systems you use most.

Switching systems

Your initials sit in the top-right corner of every screen. Press them to open your **BirgenAI ID** menu: your name, role and organisation, then every system in the estate. HERE marks the one you are in. Press another to move to it without signing in again. A system your role cannot open says so, rather than showing an error. From the same menu you can **change your password** and **sign out**.

Beside it are the **appearance** controls (light, dark, or follow your device) and the wallpaper picker.

03 Finding your way around the console

The menu on the left is grouped into sections, and each section can be folded. You see only the items your rights allow.

SECTION	ITEMS
Dashboard	Overview · Collections · Finance · Risk

Borrowers	Borrowers List · New Borrower · KYC Verification · Customer Messages · Statement Cruncher · Customer Portal
Loans	Apply for a Borrower · Applications Queue · Pipeline · Loan Calculator · Loans List · Sureties
Payments	Disbursements & Float · Repayments · Reconciliation · Suspended Payments · Journal
Collections	Work Queue · Promises to Pay · Tickets · Recoveries
Intelligence	Closed ML Loop · Early Warning · Credit Scoring · Analytics & Reporting · Model Tuning · Metric Catalogue · Document Parser · Reports · Report Builder
The Interchange	Exposure Check · Consent Register · Member Directory
Field Ops	Visits & Routes · Customers Near Me · Needs Location · Dispatch Inbox · Route Map
Comms	SMS Centre · Message Log · Reminders · Message Templates · SMS Campaigns · Email Log
Organization	Structure · Products · Charges · Workflows · Loan Settings · Application Journey · Attachment Types · Identity Policy · Additional Details · Riri Knowledge · Branding · Settings & Vault · Bureau Scrutiny · Compliance & Data · Oversight
Access	Team · Roles & Rights · Relationship Officers · Agents
Billing	Subscription & Invoices

Book switch. An organisation with more than one book (for example Boresha and Stawi) has a switch at the top left of the screen. Everything you see, every dashboard, list and report, belongs to the book that is switched on.

Filters. Dashboards carry **Branch** and **Agent** filters. A manager sees all branches; an officer sees their own book.

04 Setting up your organisation

An administrator does this once, usually during onboarding. Everything is under **Organization**.

SCREEN	WHAT YOU SET
Structure	Your organisation levels (for example Region → Branch → Unit) and the units at each level. Every borrower, loan and staff member belongs to a unit, and managers see the units below theirs.
Branding	Your logo, accent colours and tagline. They appear on your sign-in door, your installable app, the console and your customers' app.
Loan Settings	Defaults for loan limits, credit-score policy, grace periods and penalties.
Application Journey	The steps a borrower or officer goes through when applying, and which are required.
Attachment Types	The documents you collect (ID front and back, passport photo, business permit), and which are mandatory.
Identity Policy	How a borrower's identity is checked: the ID scan, the registry match, face match, and what happens when a check cannot run.
Additional Details	Extra sections for borrower records: employment, next of kin, education, business details.

Settings & Vault	Company details and your encrypted integration keys: M-PESA (Daraja) for disbursements and repayments, your SMS sender, and email. Keys are stored encrypted and never shown again after saving.
Bureau Scrutiny	When a CRB report is required, and what in it should stop or flag an application.
Riri Knowledge	Your own policies and FAQs, which Riri uses when answering staff and customers.

05 Team, roles and rights

Roles & Rights

A role is a named set of rights, for example Loan Officer, Credit Manager or Finance. Open **Access → Roles & Rights**, press **Add role**, name it, and tick its rights group by group: borrowers, applications, loans, disbursements, repayments, collections, reports, settings, team and billing. Each right says in plain words what it allows. A role can also be limited to the staff member's own book, their unit, or the whole organisation.

> **Rights do not cross systems**
> Holding full rights in PeopleHub does not grant disbursement authority in the Lending Console. Each system checks its own rights, so a person sees a system in the BirgenAI ID menu only when a role admits them to it.

Team

Under **Access → Team**, press **Add staff**. Enter the name, work email, phone (for sign-in codes), role and unit. The person receives an email with their door address and a temporary password, which they change at first sign-in. You can suspend a staff member at any time; their history stays.

06 Products, charges and workflows

Products

Under **Organization → Products**, press **Add product**. Set the name, minimum and maximum amount, term and repayment frequency, interest rate and method, grace period, rollover rules and penalties, the rules a borrower must meet, the attachments required, and which channels and branches offer it (the console, the customer app or both).

Charges

Fees such as processing, insurance or late payment are set under **Charges** and attached to products. Each has an amount or percentage, and says when it is charged: on disbursement, deducted upfront, or on each instalment.

Workflows

A workflow is the path an application takes from submission to disbursement. Under **Workflows**, create one, add its stages (for example Officer review → Credit check → Manager approval → Disbursement), and set for each stage who may act, the amount limits, and what must be complete before the stage can pass (KYC, CRB report, surety). Attach the workflow to products.

07 Borrowers

Adding a borrower

1. Open **Borrowers → New Borrower**.
2. **Basic info:** scan or photograph the national ID. The ID number, name and date of birth are read from it; check them against the card. Add the phone number and location.
3. **Credit score and limit:** captured, defaulted, or generated by the system, according to your Loan Settings.
4. **Attachments and additional details** as your organisation requires, then **Save**.

If the ID already belongs to a borrower in your book, you are taken to that borrower instead of creating a duplicate.

KYC Verification

New borrowers whose identity checks need a person's judgement wait in **KYC Verification**. Open one, compare the ID images, the portrait and any registry result, and **Approve** or **Reject** with a reason. Every decision is recorded with your name.

The borrower record (Borrower 360)

Open any borrower from **Borrowers List** to see everything in one place: details and documents, loans past and present, the repayment history, credit scores, Interchange exposure, call and SMS history, promises to pay and notes. Actions are at the top: apply for a loan, send an SMS, open a ticket, call.

Statement Cruncher

Upload a borrower's M-PESA statement PDF (with its password, if it has one) to see their cash flow: income, spending, other lenders' repayments, betting, and an affordability figure. The statement engine recognises 358 lenders by name. The result can be attached to an application.

Portfolio reallocation

To move one officer's borrowers to another, open **Relationship Officers**, choose the current officer, choose the new one, add a note and save. The move is recorded.

08 Applications and loans

Applying for a borrower

1. **Loans → Apply for a Borrower.** Find the borrower and choose a product.
2. Enter the amount and term. The schedule and charges are shown before you submit. Use the **Loan Calculator** to try amounts first.
3. Add sureties or collateral if the product requires them, attach documents, and **Submit**. The application enters the product's workflow, already scored.

Applications from the Customer Portal arrive in the same queue, also scored.

Approving

Applications Queue lists what is waiting for you, by stage. Open an application to see the score and its reasons, the Interchange exposure, any CRB report (opened beside the decision, not as a download), the cash-flow result and the documents. **Approve**, **Return** with a note, or **Decline** with a reason. **Pipeline** shows every application at every stage, so a manager can see where work is stuck.

Disbursing

An approved loan waits at the disbursement stage. With the disbursement right, open it and press **Disburse**. Funds go out through your M-PESA integration and the loan becomes active. If your organisation requires a borrower location before disbursement, the loan cannot be released until one is on file.

Managing a live loan

Open any loan from **Loans List** for its profile: schedule, payments, balance, arrears, charges and history. The actions your organisation has configured appear on the profile, for example restructure, early settlement, waiver, penalty and write-off. Each needs its own right, and most go through an approval.

09 Payments and reconciliation

SCREEN	USE IT TO
Disbursements & Float	See every disbursement and its M-PESA result, and the float balance available on your shortcode.
Repayments	See every payment received, by date, borrower, loan and channel.
Reconciliation	Match money received against loans; review what was allocated where.
Suspended Payments	Payments that could not be matched to a loan, usually a wrong account number. Open one, enter the correct borrower account (BillRefNum) and save; the payment is then allocated.
Journal	The accounting postings behind every transaction (opens in Ledgerly).

10 Collections and CallBox

In the console

Work Queue lists the borrowers due or behind, prioritised. **Promises to Pay** tracks every promise made, kept or broken. **Tickets** holds issues raised by staff or customers (KYC corrections, disputes, complaints) until they are closed.

CallBox

Open CallBox from the BirgenAI ID menu. It is the floor for agents and supervisors:

- **Overview** shows the floor today: calls, contacts, promises and money in.
- **The case file** puts everything about one borrower on one screen: loans, balance, history, referees and every phone on file, with the phone docked at the side. Press a number to call it. Record the outcome and any promise before moving on.
- **Queues and campaigns** decide who is called next. **Fast Dial** moves through a queue automatically.

- **Call records** and recordings are attached to the borrower.
- **Recoveries** and the **reports** (calls, promises, payments, portfolio performance) give supervisors the day and the month.

CallBox records the conversation and the promise. It never records a payment: money is recorded only when it actually arrives in your book.

11 Dashboards and the numbers on them

Overview is the day at a glance. Each card opens the dashboard behind it, and the `i` on a card gives its exact definition.

CARD	WHAT IT TELLS YOU
CPR	Collection performance this month: how much of this month's dues has been collected, against your target.
CPR2	The same measure across the whole book this month.
PQS	Portfolio quality: the share of the book that is clean, with nothing in arrears.
PAR 30	Portfolio at risk: the balance on loans more than 30 days behind, as a share of the book.
Default rate · NPL	The share of loans in default, and the non-performing book.
Collected today · Today's collection rate	Money in today, and prepaid plus paid today against today's dues, with what is still needed to reach the target.
Disbursed today	Loans paid out today, against the same time last week.
OLB (total) · OLB (clean)	Outstanding loan balance across active loans (excluding NPL), and the part with nothing in arrears.
This month's activity · Money in today · Approval queue	New customers, repeat loans, disbursements and declines this month; today's receipts by what they paid; and applications awaiting a decision, by level.

A card marked On target, Watch or Act now is compared with your organisation's targets. **Collections**, **Finance** and **Risk** go deeper on each.

12 Analytics, Ledgerly and PeopleHub

- **Analytics & Reporting**: portfolio, agents, branches, borrowers, collections and an explorer for questions of your own. **Reports** holds ready reports, exportable to PDF and spreadsheet, and **Report Builder** lets you build your own and schedule it to your inbox.
- **Ledgerly** reads your journal: movement by account, the journal itself, your chart of accounts and cash flows. It reports movement, not a balance sheet, because it has no opening balances to start from.
- **PeopleHub**: one record per person, joining your staff directory, branch structure, each officer's book and the call floor.

13 The Interchange and credit reports

If your organisation is an Interchange member, three screens appear under **The Interchange**:

- **Exposure Check**: for a borrower who has applied to you, and with their consent, see how many other member lenders hold them, how much they owe in total, their worst arrears and recent applications. You never see which lender, or another lender's book.
- **Consent Register**: every consent your borrowers have given for exposure checks and bureau enquiries, with its reference and time.
- **Member Directory**: the lenders in the exchange.

CRB reports. At an application's risk stage press **Request CRB report**. The report opens beside the decision. A report is charged per pull, so request one only where your policy calls for it.

14 Communications

SMS Centre shows messages sent, delivered and failed. **Reminders** are the automatic messages (due tomorrow, due today, overdue) and can be switched on or off. **Message Templates** hold your wording, with fields such as the borrower's name and balance filled in automatically. **SMS Campaigns** send to a group, for example every borrower in a branch with a loan due this week. **Customer Messages** holds conversations with borrowers.

SMS past your monthly allowance uses prepaid credit (see section 17). Sign-in codes and consent links always go out, even on a zero balance.

15 Field operations

For relationship officers who visit borrowers: **Visits & Routes** plans the day's visits in the best order, **Customers Near Me** shows borrowers around your current position, **Needs Location** lists borrowers with no location pin yet, **Dispatch Inbox** receives visits assigned to you, and **Route Map** shows them on the map.

16 Riri, your assistant

Riri is in the bottom-right corner of every screen. Use **Help & How-to** to ask how to do something ("how do I restructure a loan?"), or **Ask Riri** to ask about your book ("which branch has the highest PAR this month?", "list borrowers who broke a promise this week"). Riri answers in English or Swahili. It works only on data your role can see, and it shows the figures its answer is based on.

17 Billing and invoices

For administrators, in two places: **Billing** in the app launcher at the top right of every system (beside Change password), and **Billing → Subscription & Invoices** in the Lending Console. A lender on CallBox alone pays from the launcher.

- **Two invoices, two companies. BirgenAI Hub**, which develops ConnectedSuite, invoices your systems, usage and Interchange reports on the first day of each month. **Techcrast** invoices only its own services, such as ServiceSuite. Each invoice wears its issuer's letterhead and names the only account it may be paid to.
- **This month**: your subscription system by system, any discount or partner rate, usage so far (billed on next month's invoice) and the usage bars against your allowances.

- **Invoices**: each with its issuer and status (*due*, *paid* or *void*). **PDF** opens or downloads it for your records.
- **Paying BirgenAI Hub**: press **Pay with M-PESA**, enter the phone, and approve the prompt with your PIN. The invoice shows *paid* as soon as M-PESA confirms. Or pay **Buy Goods Till 5620596** (BIRGENAI HUB), then press **I paid** and enter the M-PESA code.
- **Paying Techcrast**: pay **Paybill 303030**, account **2044699985** (Techcrast Software Solutions Ltd), then press **I paid** and enter the code. Techcrast confirms it.
- **SMS credits**: buy bundles when the monthly allowance runs out. Credits never expire.

18 Security, data and compliance

- Every sign-in needs your password and a code sent to your phone. Never share either; staff will never ask for them.
- Every action that changes money, a borrower or a setting is recorded with who did it and when. **Oversight** shows that record.
- **Compliance & Data** is the data-subject register: requests from borrowers to see, correct or delete their data under the Kenya Data Protection Act 2019, with their deadlines.
- Your organisation's data is kept separate from every other organisation's, and is hosted in Kenya.
- Sign out on shared computers, from the BirgenAI ID menu.

19 Troubleshooting

YOU SEE	WHAT TO DO
"That email and password don't match"	Check it is your work email and that Caps Lock is off. After ten tries wait 15 minutes, or use **Forgot password?**
No sign-in code arrives	Wait a minute, then press **Resend**. Check that the phone on your staff account is right; your administrator can correct it under **Team**.
A menu item or system is missing	Your role does not include it, or your organisation does not hold that system. Ask your administrator.
"Waking up..." on the door	The service is starting; your details are fine. Try again in a few seconds.
A payment is not on the loan	Look in **Suspended Payments**; it is usually a wrong account number.
Scores or CRB checks are unavailable	Your subscription may be past due. An administrator can check **Billing**. The loan book itself keeps working.
Anything else	Ask Riri (**Help & How-to**), or email support at birgenaihub@gmail.com with the screen and the time.
